MOHAMED IBRAHIM MONGE

Flutter Developer | Backend Development with Node.js & PostgreSQL

Mohamedmonge58@gmail.com | +20 115 955 0736 | github.com/mohamedmonge58-create | linkedin.com/in/mohamed-monge | https://my-portfolio-eta-seven-27.vercel.app/

PROFESSIONAL SUMMARY

Junior Flutter developer experienced in building complete mobile applications end to end, including Clean Architecture, BLoC/Cubit and Provider state management, Firebase (Authentication, Firestore, Storage), REST API integration, and dependency injection with get_it. Comfortable structuring apps into feature-based modules, handling real-time data streams, and writing unit tests. Also builds backend APIs with Node.js, Express, and PostgreSQL. Seeking a Junior Flutter Developer role to apply this hands-on experience in a production codebase.

TECHNICAL SKILLS

Languages: Dart, TypeScript, C++
Frameworks: Flutter (Material), Android & iOS targets
State Management: Provider (ChangeNotifier), flutter_bloc (Cubit), setState / StatefulWidget
Architecture: Clean Architecture (data/domain/presentation), Repository Pattern, feature-first modules
Dependency Injection: get_it
Firebase: Authentication (incl. Google Sign-In), Cloud Firestore (typed CRUD, real-time streams), Firebase Storage
APIs / Networking: REST APIs (Dio, http), JSON serialization, typed error handling
Backend & Database: Node.js, Express, TypeScript, REST API design, JWT authentication, Zod, PostgreSQL, Prisma ORM
Routing & Storage: go_router, SharedPreferences
Testing & Tools: Unit testing (mocktail), Git, GitHub, Clean Code

PROJECTS

Movies App — Movie Discovery App

Technologies: *Flutter, Dart, Firebase (Auth, Firestore, Storage), Google Sign-In, Dio, flutter_bloc, get_it, go_router*

- **Architected** a movie discovery app using Clean Architecture (data/domain/presentation per feature), the Repository Pattern, and dependency injection with get_it, managing state with flutter_bloc (Cubit).
- **Implemented** Firebase Authentication (email/password, Google Sign-In, password reset) with Firestore-backed profiles supporting name/phone editing and preset or gallery avatar upload to Firebase Storage.
- **Integrated** a movie REST API with Dio using typed error handling, debounced search, favorites with optimistic UI updates, auth-gated routing (go_router), and unit tests (mocktail).

Islami — Islamic Companion Application

Technologies: *Flutter, Dart, REST APIs (http), audioplayers, SharedPreferences, flutter_svg, carousel_slider*

- **Built** a multi-feature Flutter app: Quran reader, Hadith browser, Azkar, digital Sebha, Prayer Times, and live Quran Radio.
- **Integrated** two REST APIs (mp3quran.net, Al-Adhan) with JSON parsing into typed Dart models and HTTP error handling.
- **Designed** a singleton **AudioPlayerManager** for playback state across Radio/Reciter screens, with SharedPreferences-based local caching of recently viewed content.

M3loma — Educational Platform (Flutter, Node.js, PostgreSQL)

Technologies: *Flutter, Dart, Firebase, flutter_bloc, video_player, Node.js, Express, TypeScript, Prisma, PostgreSQL, JWT, Next.js*

- **Implemented** Firebase Authentication (registration and login) with Cloud Firestore user profiles and profile editing in the Flutter app.
- **Built** course browsing by topic, course details, learning screens, and a reusable video preview player (video_player) with Cubit.
- **Developed** a separate Node.js/Express/TypeScript REST API with JWT authentication, role-based admin access, Zod validation, and course, lesson, and enrollment endpoints.
- **Designed** a PostgreSQL schema with Prisma ORM (users, courses, lessons, enrollments, progress, payments) and created a Next.js admin dashboard.

EDUCATION

Bachelor's Degree, Computer Science — Faculty of Science, Tanta University 2020 – 2024
GPA: 2.64 (C+)

ADDITIONAL INFORMATION

- Languages: Arabic (Native), English (Elementary Proficiency)
- Military Status: Final Exempted (September 2025)
